Reasons for Allowance

Claims 1, 8-11, 19, 21-24 and 26-32 are indicated as allowed. The closest prior art identified in U.S. Patent 5,721,691 to Wuller et al. Claims 1, 19, 21 and 32 are independent. Claims 8-11, 19, 22-4 and 26-31 are dependent.

Claim 1: Claim 1 calls for a method of organizing information in a computer including assigning a bar code to a floor plan schematic, providing an item of observation information related to a construction defect and assigning an identification code to the item of observational information. Claim 1 has been amended to further define the scanning of the floor plan schematic, thereby creating a digital representation and associating in a table in the computer the bar code to the identification code. These amended features are not taught by Wuller et al.

Claims 8-11: Depend on claim 1.

Claim 19: Claim 19 calls for a program storage device instructions that assign an object identifier to a graphical representation, receive a request for the display of an observational information item that includes construction defect information and assign an identification code to the observational information item. Claim 19 has been amended to call for the scanning of the floor plan schematic of the building thereby creating a digital representation and associating in a table in the computer, the object identifier to the observational information item. These amended features are not taught by Wuller et al.

Claim 21: Claim 21 calls for a method for organizing information in a computer that comprises assigning an object identifier to a graphical representation, providing an item of observational information that includes location and defect information for a building and assigning an observational identifier to the observational information. Claim 21 has been

amended to call for scanning the graphical representation to create a digital representation and associating in a table in the computer, the object identifier to the observational identifier. These amended features are not taught by Wuller et al.

Claims 22-24 and 26-31: Depend on claim 21.

Claim 32: Claim 32 calls for assigning a bar code to a graphical representation of a product, providing observational information, assigning an identification code to the observational information, where the identification code is classified into one of a plurality of defect types, and annotating the graphical representation with the identification code. The claim has been amended to call for scanning the graphical representation thereby creating a digital representation and associating in a table in the computer the bar code to the identification code. These amended features are not taught by Wuller et al.
